In mathematics, the question of whether the Fourier series of a periodic function converges to the given function is researched by a field known as classical harmonic analysis, a branch of pure mathematics. Convergence is not necessarily given in the general case, and certain criteria must be met for convergence to occur. Determination of convergence requires the comprehension of pointwise ...

In mathematics, Fourier's Bessel series is a particular kind of generalized Fourier series (an infinite series expansion on a finite interval) based on Bessel functions.. Fourier's Bessel series are used in the solution to partial differential equations, particularly in cylindrical coordinate systems. The series formed by the Bessel function of the first kind is known as the Schlömilch's Series

Section 8-7 : Convergence of Fourier Series. Over the last few sections we've spent a fair amount of time to computing Fourier series, but we've avoided discussing the topic of convergence of the series.

Differential Equations - Convergence of Fourier Series

This is a shifted version of $[0, 1]$. On the time side we get $[-.7, .7]$ instead of $[-1, 1]$, because our cycle isn't exactly lined up with our measuring intervals, which are still at the halfway point (this could be desired!). The Fourier Transform finds the set of cycle speeds, amplitudes and phases to match any time signal.

In this section we will the idea of partial derivatives. We will give the formal definition of the partial derivative as well as the standard notations and how to compute them in practice (i.e. without the use of the definition). As you will see if you can do derivatives of functions of one variable you won't have much of an issue with partial derivatives.

En analyse, les séries de Fourier sont un outil fondamental dans l'étude des fonctions périodiques. C'est à partir de ce concept que s'est développée la branche des mathématiques connue sous le nom d'analyse harmonique. Un signal périodique de fréquence f et de forme quelconque peut être obtenu en ajoutant une sinusoïde de fréquence f (fondamentale), des sinusoïdes dont les ...

Abstract: We consider an attraction-repulsion chemotaxis model coupled with the Navier-Stokes system. This model describes the interaction between a type of cells (e.g., bacteria), which proliferate following a logistic law, and two chemical signals produced by the cells themselves that degraded at a constant rate.
